

JOSM: Icon-Rotation + Text-Rotation (example next slide)

individual elements (svg and text) are superimposed and form symbols with texts

Example: Railway-signals rotated by way, icon-offset-y: 35, rail in gray,
„Zs 3“ should be a rotated text with text-offset-x and text-offset-y
in a also rotated coordinate system (like icon !)

e.g.: „Zs 3“ stand for value of key: railway:signal:speed_limit:speed
